## **GOLDSEAL SYSTEM**

Goldseal by IKO is a high performance Elastomeric built up roofing system guaranteed for up to 15 years against faulty design, materials and workmanship. Goldseal offers the specifier and the client the most advanced flat roofing remedy for new build and refurbishment projects. A full design and specification service is provided plus a network of approved contractors selected, trained and vetted by IKO to ensure the highest standards of workmanship.

Goldseal by IKO is available in pour and roll and torch on applications and can also be used with Insul8 systems insulations. The system has been independently approved by the British Board of Agrément, certificate number 05/4198 for use as a 2 or 3 layer pour and roll system on flat and sloping roofs.

Goldseal comes with a 15 year guarantee which covers materials, design and workmanship via a IKO specification, when installed by a IKO Goldseal approved contractor.

The Goldseal system is also available as an “HS” design. IKO's Hybrid specification is used when a project has very specific project criteria that requires a tailored design. The specification designs out risks whilst ensuring that the requirements of CDM, Building Regulations and British Standard Codes of Practice are met.

The HS system design comprises cold-applied build up with a traditional torch-on or pour and roll capsheet. Importantly, design detailing is specified using the latest cold applied technologies at a minimum of 0.5m around all roof details.

The HS System has been recognised by the [Construction Products Association](#) in their 2009 Innovation and Achievement publication.
