ROOFING & MAINTENANCE LTD

Steel Cladding

Our specialist cladding teams have over 20 years experience of all types of cladding and we pride ourselves on the finish of the final product. There are many different systems on the market and we are able to advise on the best one suited to your needs.

Refurbishment of corrugated roofing and cladding gives you the opportunity to upgrade the insulation of your building and create a new weathertight covering. This can be achieved by full replacement with composite or built-up roof cladding systems or when appropriate, overcladding existing roofs and walls.

That's where we come in. Our roofing experts are happy to survey your roof and provide a detailed description of your building and roofing issues. We'll work with you to find out which option best suits your needs and budget. By working with our partners we're also able to find the most cost effective products for your refurbishment.
