SPECTRAPLAN TPE

Spectraplan TPE Roofing System

Spectraplan roofing systems use the very latest in advanced polymer technology. Incorporating a range of membranes and accessories, these “next generation” TPE systems combine the best performance characteristics of thermoplastics (e.g. PVC) and elastomers (e.g. EPDM). This ensures optimum results both during installation and in performance.

Spectraplan roofing membranes can be mechanically fastened, adhered or loose laid and ballasted.

Key benefits include:

- Latest polymer technology
- Environmental benefits
- No need for solvent cleaning or preparation
- Compatible with bitumen and eps (extruded polystyrene)
- High resistance to ageing and wind uplift
- Non capillary construction - membranes do not absorb moisture
- Resistance to root penetration and many organic and inorganic substances
- Excellent welding characteristics
- Elasticity
- Complete range of fixings and accessories.

Spectraplan TPE membranes have the additional environmental benefits of being free from plasticizers, chlorine, (H)CFCs, halogens and heavy metals. They can also be recycled into primary products at the end of their long useful life.
